Otter Tail County Solid Waste
218-998-4898

Our mission is to provide residents and businesses with the opportunity to reduce, reuse and recycle materials, save money, and properly dispose of construction and demolition materials by adhering to the local, state and federal rules and regulations.

Why Should I Sort the Load?

- ❖ A clean load of shingles is easier for customers to unload at the transfer station, saves customers money, conserves resources, and reduces landfill space by recycling materials.
- ❖ The clean shingles will be recycled into pavement for roads in Otter Tail County.

FAQs

Business Hazardous Waste
Safety Kleen: Fargo, ND
701-237-9070

What does “clean” mean for clean shingles and concrete? A clean load of shingles would include shingles, nails and tar paper but would **not** include wood, plastic, metal vents or flashing, or paper shingle bags. Clean concrete would include rebar and concrete **only**.

Do I save money if I sort my loads? YES, you can save over **half the cost** of unsorted or “dirty” loads. If you take one cubic yard of **clean** concrete to the demolition landfill you would pay \$4.00 but if your load is not sorted you would pay \$10.60. These savings can add up to increase your profits.

Does the demolition landfill accept treated lumber? Yes, but it must be separated from other lumber products and placed in the bypass bin at the transfer station/demolition landfill . **Please sort your loads.**

Don't throw your money in the dumpster

What do I do with carpeting? Take carpeting and padding to a transfer station/demolition landfill. Do not throw it in the garbage. It is not accepted in demolition landfills but can be placed in bypass bins at the transfer station/demolition landfill.

I have a lot of cardboard—what can I do with it? Call the Solid Waste Department and a scheduled pickup of your cardboard can be arranged with the cardboard packing truck driver **free** of charge. The cardboard must be flattened.
